Milorganite® 6-2-0 with 4% Iron Reduces Chlorosis

*Center Ixora treated with 2½ lbs. Milorganite® 6-2-0
Coral Gables (FL)*

In a demonstration plot in Coral Gables, FL, ixora were treated with Milorganite® 6-2-0 containing 4% organically complexed iron. In the photo above, only the center Ixora was treated.

According to Dale Campbell, GCS, “Ixora are well known to become chlorotic here in south Florida. Applying Milorganite® 6-2-0 returns them to their natural, deep green color.”

Use Milorganite® 6-2-0 with 4% organically complexed iron to treat plants that are chlorotic due to iron deficiency. From mature trees to newly transplanted shrubs, you will be pleasantly surprised at your results.

The result for you?

- No need for expensive removal and replacement of chlorotic plants
- A better looking landscape
